FABRIC FORMED CONCRETE

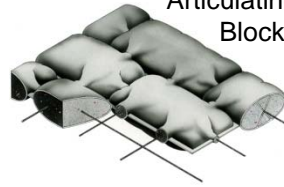

Filter Point

Environmat

Articulating Blocks

Armour Unit

FABRIC-FORMED CONCRETE are Linings, Mats, and Armor Units which are filled in place by pumping fine aggregate concrete into the forms. Thanks to the flexibility of the forms, easy installation and reduced material & equipment costs its ideal for both standard and very challenging applications.

Key advantages

- ❖ Fast and easy installation
- ❖ Stable and flexible systems
- ❖ Reduced uplift pressure
- ❖ No heavy equipment required
- ❖ Simple and fast job mobilization
- ❖ No dewatering required
- ❖ Environmental compatibility
- ❖ Standard & Custom made Forms

Wide Range of Applications, e.g.:

- ❖ Lining of Drainage Ditches, Channels and Canals
- ❖ River Banks and Embankments
- ❖ Scour Protection for Bridge Abutments and Piers
- ❖ Coastal Structures and Erosion Control
- ❖ Linings for Ponds and Reservoirs
- ❖ Seawall and Bulkhead Scour Protection
- ❖ Underwater Pipeline Ballast and Protection
- ❖ Pile Jackets to reinforce existing piles
- ❖ Slope Stabilization and Erosion Prevention
